

HULL ASSEMBLY

STEP 1

So that construction can proceed rapidly once assembly is started, make the following sub-assemblies: assemble bulwarks 9 to 16. Bulwarks 9, 10, A, 22 connect at two points, the remainder are four pieces and are assembled in same manner as bulwark 12 which is shown in typical bulwark assembly sketch. Assemble keel parts 1 to 26 on flat surface as shown. Make keel straight. Make two bulwarks by connecting 70 to 71 on flat surface. Connect bulwark 70 to 71 together to form rudder. Allow all parts to dry thoroughly. Run keel assembly in dry, remove from flat surface and put out on cross marks to keep joints flat. Glue joints in sequence in place. Top coating resin is added to form a triple layer as shown in step 2. Hull is covered with presat resin sections; the pattern is of which are provided full size, but last
