

Biobor JF Aviation

The ONLY Aviation Fuel Biocide

- Kills & prevents microbial growth in aviation fuels
- Dual phase – partitions into water and fuel for highly effective kill
- Prevents microbial corrosion issues and filter plugging
- APPROVED for Aviation use (turbine & airframe OEMS, FAA & IATA)
- Widely used by airlines, military and private aircraft since 1965

Product Description

Biobor® JF was specially formulated and introduced in 1965 to combat and eliminate Hydrocarbon Utilizing Micro-Organisms (Hum Bugs) throughout all jet fuel and avgas powered aircraft. Jet, turboprop and reciprocating engine as well as aircraft manufacturers worldwide have come to recommend this outstanding additive in their operating and maintenance manuals. Biobor® JF is used by airlines, general aviation operators and militaries around the globe and is accepted for use by the FAA and IATA. Biobor JF is effective in both the fuel and water phase of all fuels, is non-corrosive and safe for both operating personnel and the environment. Biobor JF is the original, most recognized and accredited aviation fuel biocide in the world. [BUY NOW](#)
